Cell: (949) 677 - 4883

Objective:

Seasoned full stack software engineer in pursuit of new opportunities to further develop his skills in software development and to contribute to an engaging and innovative team-based environment.

Expertise:

- Building REST based backend services with languages such as C#, Java (Spring), Python (Flask), and Node.js
- Designing and creating user friendly dynamic frontend web applications on JavaScript and TypeScript based libraries such as Angular.js, React.js, Angular, and Oracle OJET onto pages using HTML5, CSS3, and SASS
- Optimizing SPROC executions on Microsoft SQL Server for applications supporting billions of records
- Maintaining source code with GIT, peer-reviewing code and following strict protocol for production releases
- Utilizing Kubernetes to manage application node clusters utilizing Oracle's cloud infrastructure (OCI)
- Customizing new Docker images for repeatable application deployments
- Leveraging GitLab to build autonomous CICD pipelines to deploy production applications
- Practicing core principles of Scrum and Agile to make dynamic and quick reactive new products
- Leading technical discussions with designers, PO, Architects and other stakeholders to leverage new technologies

Professional Experience:

Oct 2022 - May 2024

Salesforce

Software Engineer MTS

- Resolved bugs, integrated metrics, and improved efficiency of applications belonging to Marketing Cloud Contacts
- Refined backlogs and assisting with prioritization of work for each release
- Built large scale telemetrics around billing clients on a Microsoft SQL Database with over billions of records

Jul 2020 - Sep 2022

Oracle

Senior Cloud Engineer SMTS

- Lead and developed new internal applications from inception to general availability
- Interviewed, onboarded and mentored new team members for a cross regional team
- Developed automated and continuous delivery pipelines for scalable and consistent builds and deployments

Jan 2017 - Jul 2020

USAA (United Services Automobile Association)

Software Engineer

- Designed and Implemented frontend and backend applications within the enterprise data and operations communities
- Created innovative proof of concepts to support enterprise solutions during Hackathon events
- Found and implemented resolutions during emergency major system outages to critical core applications
- Migrated critical applications from legacy frameworks into modern cloud based fast delivery frameworks
- Optimized applications increasing application performance in both frontend and API layer

Mar 2014 - Oct 2016

United States Navy

Interior Communications Petty Officer Second Class

- Led a team in overhauling the military command's inventory of technical equipment and weapons systems
- Resolved many outstanding internal communication electronic issues through reviewing technical manuals, drawings and schematics, troubleshooting, replacement and repair.

Feb 2010 - Mar 2014

University of California, Irvine Student Center and Events Services

Programmer Analyst

- Supported enterprise application deployments, end users and networking equipment
- Overhauled point of sale system to modern payment systems

Education:

Criminology, Law and Society B.A. 2013

University of California, Irvine, Irvine, CA
